

International Conference on Advances in Big Data, Computing, Data Communication Systems (icABCD 2018), 6-7 August 2018, Durban, South Africa

A conceptual framework representing the user experience for business intelligence front ends

Jooste, C; Van Biljon, J and Botha, A.

Abstract:

Business Intelligence (BI) has been a top priority of information technology (IT) executives for several years, the wider academic research community has gradually embraced the topic, but little research has been published on the user experience (UX) of the front-end of BI applications.
