

The Green Building Handbook South Africa Volume 12: The Essential Guide Van Wyk, Llewellyn V (ed)

Abstract

At a higher level the quality of infrastructure in South Africa continues to deteriorate and achieving sustainable infrastructure in the light of increasing demand is a key requirement for improving the quality of life of our people. A chapter is dedicated at exploring the sustainability requirements for infrastructure in South Africa. Lastly, it is time for me to say farewell and to pass on the editorship of this handbook: I am happy to announce that my colleague Peta de Jager, will take over the helm in the new year. I wish her every success in her future endeavours. It has been a pleasure and a privilege to be involved in the conceptualisation and development of the Handbook over the past 12 years, and for this I am very grateful to the publishers Alive2Green and the various staff members I have had the pleasure of working with.
